3 deep-dives you should really read

[Stop calling it 'The AI bubble': It's actually multiple bubbles, each with a different expiration date](#)

VentureBeat - AI · Topic: AI/Cloud/Quantum

- **What it is:** The AI market is not a single bubble, but rather three distinct layers: wrapper companies, foundation models, and underlying infrastructure, each with unique economic dynamics and market lifecycles.
- **Who:** Key players include vulnerable wrapper companies, precariously positioned foundation model providers like OpenAI and Anthropic, and resilient infrastructure giants such as Nvidia and major cloud providers.
- **What it does:** This framework differentiates AI ventures based on their technological moats, defensibility against commoditization, and susceptibility to absorption by larger platforms, influencing their long-term survival.
- **Why it matters:** Understanding these varying risk profiles and expiration dates is critical for executives to make strategic investment decisions, identify sustainable value, and avoid overvalued segments within the AI ecosystem.
- **Strategic view:** C-level executives must prioritize investments in foundational AI infrastructure and proprietary data integration for enduring value, while exercising extreme caution with easily commoditized application wrappers.
