3 deep-dives you should really read

Going beyond pilots with composable and sovereign AI

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** This news highlights that most enterprise generative AI pilot programs fail to deliver measurable business value or reach production due to underlying infrastructure limitations.
- **Who:** This primarily impacts C-level executives and technology leaders in enterprises across Telco, Media, and Tech sectors investing heavily in AI initiatives.
- **What it does:** It details how current enterprise AI adoption is stalled at the pilot stage, failing to yield tangible business value or scale into production systems.
- **Why it matters:** This matters because it exposes a critical flaw in current enterprise AI strategies, indicating that billions in investment are not translating into expected business outcomes.
- **Strategic view:** To unlock AI's strategic value, executives must prioritize robust, composable, and sovereign AI infrastructure solutions that enable data accessibility and overcome current rigidities beyond models.

The Download: the US digital rights crackdown, and AI companionship

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** The US government under the Trump administration is escalating its crackdown on digital rights by banning individuals involved in fighting online hate from entering the country.
- **Who:** The Trump administration is targeting five individuals, framing their activism against online hate as a reason to ban their entry into the United States.
- **What it does:** This action bans individuals involved in fighting online hate from entering the US, signaling a significant escalation in the government's approach to digital rights.
- **Why it matters:** This move establishes a concerning precedent regarding government control over online speech and digital activism, potentially impacting free expression and global internet governance.
- **Strategic view:** TMT executives must recognize the rising geopolitical risks around digital rights and content moderation, influencing policy compliance and cross-border operational strategies.

What it's like to be banned from the US for fighting online hate

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** A foreign national, known for fighting online hate, has been barred from entering the United States by US Customs and Border Protection without clear public justification.
- **Who:** Josephine Ballon, a Berlin-based individual combating online hate, was notified by US Customs and Border Protection of her travel ban to the United States.
- **What it does:** This action prevents an individual from entering the US, setting a precedent where online activism against hate speech may trigger national border control measures.
- **Why it matters:** This case highlights escalating government scrutiny of online activity, potentially impacting legal frameworks and operational responsibilities for global content moderation platforms and user rights.
- **Strategic view:** TMT executives must strategize for increasing government intervention in online speech, navigating jurisdictional complexities, and balancing user freedom with compliance to diverse national security and immigration policies.
