Talking to AI agents is one thing — what about when they talk to each other? New startup BAND debuts 'universal orchestrator'

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** BAND is a new startup offering a "universal orchestrator" platform designed to enable seamless, deterministic communication and collaboration between diverse, fragmented AI agents across various frameworks and clouds.
- **Who:** BAND, a newly launched startup also known as Thenvoi AI Ltd., has secured \$17 million in seed funding to address the growing fragmentation challenges within enterprise AI agent deployments.
- **What it does:** BAND provides an agentic mesh for deterministic, multi-peer AI communication and a Control Plane for governance, ensuring secure and scalable interaction without relying on LLMs for routing.
- **Why it matters:** This platform matters because it solves the critical problem of fragmented AI agent ecosystems, enabling complex multi-agent workflows and preventing vendor lock-in for enterprises.
- **Strategic view:** TMT executives must recognize this as crucial infrastructure enabling scaled, secure multi-agent AI deployments across diverse environments, driving operational efficiency and integrated intelligent automation while mitigating vendor dependency.

85% of enterprises are running AI agents. Only 5% trust them enough to ship.

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** This news details the significant enterprise challenge of moving AI agent pilots into production, with only 5% succeeding due to a critical lack of trust and robust security architectures.
- **Who:** Cisco, through its President and CPO Jeetu Patel, is proactively addressing enterprises' AI agent trust deficit with new security offerings and a bold internal zero-human-code mandate.
- **What it does:** Cisco introduces new security tools like Defense Claw and extends zero trust to AI agents, aiming to build robust trust architectures and facilitate secure production deployment for enterprises.
- **Why it matters:** The trust deficit prevents 80% of enterprises from deploying AI agents in production, risking bankruptcy if not solved and offering market dominance to those who master secure, trusted agent delegation.
- **Strategic view:** This signifies a critical industry shift where AI agent trust and security become the ultimate competitive differentiators, demanding a complete re-architecture of enterprise security and software development methodologies.

Monitoring LLM behavior: Drift, retries, and refusal patterns

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** The article describes the AI Evaluation Stack, a new infrastructure layer for robustly testing and monitoring the unpredictable behavior of large language models in enterprise environments.
- **Who:** This framework is designed for engineers and product builders responsible for deploying enterprise-ready AI, especially within high-stakes industries facing significant compliance risks.
- **What it does:** It employs a structured pipeline of deterministic and model-based assertions, including LLM-as-a-Judge, to verify AI system functionality and ensure quality pre- and post-deployment.
- **Why it matters:** Robust AI evaluation prevents costly production failures, ensures predictable performance, and is vital for safely deploying generative AI solutions that meet strict enterprise compliance requirements.
- **Strategic view:** Investing in a comprehensive AI Evaluation Stack is crucial for C-level executives to mitigate AI risks, accelerate responsible innovation, and maintain trust in enterprise-wide generative AI deployments.
