The Download: 10 climate tech companies to watch

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** This document presents a curated list profiling ten promising companies operating within the rapidly evolving climate technology sector.
- **Who:** The focus is on innovative companies that are developing and deploying technologies aimed at addressing climate change challenges globally.
- **What it does:** These featured companies are actively engaged in creating and implementing technological solutions to mitigate environmental impact and promote sustainability.
- **Why it matters:** Monitoring these companies is crucial for understanding emerging trends, investment opportunities, and the future trajectory of climate crisis solutions.
- **Strategic view:** Highlighting these innovators offers insight into key players driving sustainable economic growth and technological advancements essential for a green transition.

Your Next Great Read Might Be Certified 'Organic'

Wired – Business · Topic: **AI/Cloud/Quantum**

- **What it is:** A new 'organic literature' certification mark will identify books exclusively authored by humans, distinguishing them from AI-generated content.
- **Who:** This initiative primarily benefits readers seeking authentic human creativity and authors aiming to differentiate their work in a crowded market.
- **What it does:** The certification provides a clear signal for human-authored content, allowing consumers to navigate a growing volume of AI-generated textual output.
- **Why it matters:** It addresses concerns about content authenticity and trust, providing transparency in an increasingly AI-permeated digital information landscape.
- **Strategic view:** TMT executives must recognize the emerging value of verified human-created content, potentially influencing platform policies, content monetization strategies, and trust frameworks.

Hackers obtain counterfeit TLS certificates for Google and other large services

Ars Technica – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Hackers have acquired unauthorized Transport Layer Security certificates, mimicking legitimate ones for major services including Google, indicating a significant digital security breach.
- **Who:** Malicious actors successfully targeted three domain registries, thereby compromising the digital trust of major online services like Google and their users.
- **What it does:** This breach grants attackers the ability to impersonate legitimate websites, intercept encrypted communications, and launch highly convincing phishing attacks against users and organizations.
- **Why it matters:** The incident fundamentally erodes trust in established digital security protocols and could lead to widespread data theft, service disruptions, and severe reputational damage for affected entities.
- **Strategic view:** TMT leaders must urgently reassess supply chain security, particularly for foundational internet infrastructure like domain registries and certificate authorities, to prevent systemic trust collapses and regulatory backlashes.
