3 deep-dives you should really read

Microsoft launches new in-house AI models it says cut costs up to 89% versus OpenAI

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Microsoft has launched new in-house developed AI models, MAI-Image-2.5-Pro and MAI-Voice-2-Flash, alongside others, designed for specialized high-volume enterprise workloads.
- **Who:** Microsoft AI's Superintelligence team developed these specialized models and is actively integrating them across Microsoft's extensive product portfolio.
- **What it does:** These production-ready models demonstrate significant cost reductions, up to 89% in GPU expenses, and enhanced performance across key Microsoft products like Bing, PowerPoint, and Dynamics 365.
- **Why it matters:** This initiative strategically reduces Microsoft's dependency on third-party frontier models, significantly lowering operational costs and optimizing hardware utilization for critical AI infrastructure.
- **Strategic view:** This move signals Microsoft's strategic shift towards vertical AI integration, demonstrating that purpose-built, cost-optimized models can rival frontier performance, impacting future TMT AI infrastructure and service development.

Anthropic launches Claude Opus 5, a cheaper AI model for coding, agents and enterprise workflows

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Claude Opus 5 is Anthropic's new AI model, offering near-flagship intelligence for coding and enterprise workflows at significantly reduced operational cost.
- **Who:** Anthropic, a leading AI model developer, launched Claude Opus 5, aiming to capture more enterprise market share with cost-efficient, high-performance models.
- **What it does:** Claude Opus 5 excels in complex coding, knowledge work, and enterprise automation, delivering superior accuracy and efficiency at a lower token cost per task.
- **Why it matters:** This launch matters as it signals a strategic shift in the AI market towards optimizing cost-efficiency and practical performance for widespread enterprise adoption, beyond raw intelligence.
- **Strategic view:** TMT executives must prioritize AI models demonstrating superior cost-performance and verifiable agency for scalable enterprise integration, shifting focus from peak intelligence to operational efficiency and long-term value.

Multi-turn attacks broke AI models 88% of the time — single-turn testing missed it, Cisco AI security lead warns at VB Transform 2026

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** New Cisco research reveals that flagship AI models are critically vulnerable to multi-turn adversarial attacks, succeeding up to 88% of the time, a risk often overlooked by traditional single-turn testing methods.
- **Who:** Cisco's AI security lead, Amy Chang, presented findings at VB Transform 2026, challenging current red-teaming practices used by major AI model providers and enterprises deploying agentic AI systems.
- **What it does:** This research exposes a significant gap in AI security, demonstrating that continuous conversational attacks can exploit vulnerabilities in AI agents that single-turn prompts consistently fail to identify.
- **Why it matters:** Enterprises face widespread AI agent security incidents due to insufficient current controls, making advanced multi-turn threat simulation crucial for protecting AI deployments and maintaining operational integrity.
- **Strategic view:** C-level executives must prioritize comprehensive AI security frameworks beyond basic testing, investing in agent identity, isolation, and continuous multi-turn adversarial simulations to mitigate significant operational and reputational risks.
