Meta researchers taught an 8B AI model to match Claude Opus 4.5 — without the frontier price tag

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** EvoHarness-RL is a novel training framework by Meta AI and University of Illinois Urbana-Champaign that teaches AI agents to optimally manage external information and tools for complex, long-horizon tasks.
- **Who:** Developed by Meta AI and University of Illinois Urbana-Champaign researchers, EvoHarness-RL trains AI agents to autonomously manage their operational environment and tools during complex workflows.
- **What it does:** EvoHarness-RL unifies an agent's external support systems into a Belief, Progress, and Experience interface, enabling it to learn optimal, cost-aware management of environmental data through specific meta-actions.
- **Why it matters:** This framework dramatically enhances the performance of smaller, cost-effective AI models, allowing them to autonomously manage complex tasks and external data more efficiently than larger, more expensive frontier models.
- **Strategic view:** This innovation facilitates widespread, cost-efficient deployment of highly autonomous and adaptable AI agents across TMT, reducing reliance on expensive frontier models and accelerating enterprise workflow automation with superior performance.

Cohere Parse 5 loses the benchmark on points. It wins on cost per page.

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Cohere Parse 5 is a 2.3-billion-parameter vision language model designed to convert various enterprise documents into structured Markdown, prioritizing cost-efficiency over raw accuracy.
- **Who:** Cohere released Parse 5, a specialized document parsing solution aimed at enterprises struggling with cost-effectively processing large volumes of unstructured documents for AI integration.
- **What it does:** Parse 5 processes document images through a single vision-language model pass to accurately convert them into structured Markdown, including tables as HTML, with strong language support at a low cost.
- **Why it matters:** This release matters because document parsing is critical for enterprise AI adoption, and Parse 5 offers a compelling cost-performance balance for high-volume structured data extraction, bridging a market gap.
- **Strategic view:** TMT executives should view Parse 5 as validating a strategic shift towards specialized, cost-optimized AI models for specific enterprise challenges like document parsing, enabling broader and more economical AI deployment.

The Download: a secretive antiaging drug and joining virtual power plants

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** A biotechnology startup claims to have discovered a drug capable of rejuvenating human blood, potentially reversing biological aging indicators and enhancing healthspan.
- **Who:** Generation Lab, an emerging biotech company, is at the forefront of this research, positioning itself within the rapidly expanding human longevity market.
- **What it does:** This experimental drug purports to make an individual's blood physiologically 'younger,' aiming to improve overall vitality and mitigate age-related health declines.
- **Why it matters:** This innovation signifies a potential breakthrough in anti-aging science, attracting immense investment and shaping future healthcare models focused on life extension.
- **Strategic view:** TMT executives should monitor this sector for opportunities in digital health platforms, personalized wellness solutions, advanced diagnostics, and data-driven longevity services.
