3 deep-dives you should really read

Nvidia finds that simple linear math can replace costly AI model handoffs

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** This is a novel Nvidia technique enabling efficient transfer of AI model memory (KV cache) between different sized models without recomputation.
- **Who:** Nvidia researchers developed a cross-model KV cache transfer technique to address costly recomputation challenges in agentic AI systems.
- **What it does:** It maps an AI model's internal conversation memory to another model using simple linear math, drastically reducing computation and latency during model handoffs.
- **Why it matters:** This innovation significantly cuts operational costs and latency for complex multi-model AI workflows by eliminating redundant memory recomputation, improving enterprise AI efficiency.
- **Strategic view:** For TMT, this unlocks more scalable and cost-effective deployment of sophisticated AI agents, accelerating enterprise AI adoption and enabling advanced services by optimizing compute resources.

This company's plans to deploy space mirrors could jeopardize the night sky for many

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** Reflect Orbital is developing space-based mirrors to selectively redirect sunlight towards Earth, aiming to provide on-demand illumination or power.
- **Who:** Reflect Orbital, a US-based aerospace company, is pioneering the deployment of large orbital mirror systems for space-to-Earth energy delivery applications.
- **What it does:** Reflect Orbital's Earendil-1 test satellite will deploy an 18-meter mirror to demonstrate precision sunlight redirection, potentially impacting terrestrial night sky visibility.
- **Why it matters:** This initiative highlights emerging orbital energy technologies while raising concerns about light pollution, satellite visibility, and the preservation of astronomical observations.
- **Strategic view:** TMT companies should monitor potential regulatory frameworks regarding orbital activities and light pollution, as well as the long-term implications for space-based infrastructure and scientific research.

The Download: threats from space mirrors and credit for AI drugs

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** A company is developing plans to deploy orbital space mirrors, aiming to beam directed sunlight back to specific Earth locations on demand.
- **Who:** An unnamed company is actively pursuing the development and deployment of advanced space mirror technology to manipulate solar radiation.
- **What it does:** These proposed space mirrors are engineered to redirect and reflect solar energy, specifically targeting Earth to provide artificial illumination.
- **Why it matters:** This initiative could unintentionally and significantly brighten the night sky, posing substantial threats to astronomical observation and natural ecosystems.
- **Strategic view:** The deployment of such large-scale space infrastructure raises critical questions regarding light pollution, regulatory oversight, and the broader environmental impact of space commercialization.
