3 deep-dives you should really read

Anthropic finally beat OpenAI in business AI adoption — but 3 big threats could erase its lead

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Anthropic's Claude has for the first time exceeded OpenAI's ChatGPT in paid business AI adoption, as reported by the May 2026 Ramp AI Index.
- **Who:** Anthropic and OpenAI are the core entities, with Ramp, a corporate card and finance platform, providing the adoption data.
- **What it does:** Anthropic's successful strategy of targeting early adopters and leveraging its Claude Code product has dramatically increased its corporate AI market share.
- **Why it matters:** This lead signifies a major shift in enterprise AI preference, yet Anthropic's position remains vulnerable due to high costs, compute limitations, and its pricing model.
- **Strategic view:** TMT executives must strategically evaluate AI vendor selection, balancing adoption rates with long-term cost, performance, and resource sustainability to avoid budget crises and operational disruptions.

AI IQ is here: a new site scores frontier AI models on the human IQ scale. The results are already dividing tech.

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** AI IQ is a new online platform that scores frontier artificial intelligence models on human-like IQ and EQ scales for easier comparison and understanding.
- **Who:** Ryan Shea, an engineer, entrepreneur, and angel investor known for co-founding Stacks, created the AI IQ project.
- **What it does:** The platform evaluates over 50 large language models across 12 benchmarks in four dimensions, generating composite IQ and EQ scores.
- **Why it matters:** This system simplifies complex AI model performance data into easily digestible metrics, aiding enterprise technologists in market legibility and procurement decisions.
- **Strategic view:** C-level executives can leverage these standardized IQ and EQ scores to strategically select AI models, optimizing investment and accelerating reliable integration across their TMT operations.

Frontier AI models don't just delete document content — they rewrite it, and the errors are nearly impossible to catch

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** A Microsoft study reveals that even frontier AI models silently corrupt up to 25% of document content in multi-step delegated workflows, making errors difficult to detect.
- **Who:** Microsoft researchers conducted the study, testing frontier LLMs from OpenAI, Anthropic, Google, Mistral, xAI, and Moonshot using the DELEGATE-52 benchmark.
- **What it does:** The study introduces the DELEGATE-52 benchmark to simulate long-horizon document editing tasks across 52 domains, evaluating content degradation in AI-driven workflows.
- **Why it matters:** This research warns that current frontier LLMs are not reliably trustworthy for extensive knowledge work automation due to significant content corruption and subtle error introduction, especially in natural language tasks.
- **Strategic view:** TMT executives must prioritize robust, domain-specific AI governance and human-in-the-loop validation for knowledge automation initiatives, acknowledging current LLM limitations in complex, iterative document processing.
