3 deep-dives you should really read

Qwen3.8-Max arrives with a bold claim: it outperforms GPT-5.6 Sol Max and Fable 5 on agentic computer use

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Qwen3.8-Max is Alibaba's new flagship 2.4-trillion-parameter multimodal LLM, designed for autonomous software engineering and long-horizon enterprise work.
- **Who:** Alibaba's Qwen AI research team, a division of the Chinese e-commerce and cloud giant, developed and released Qwen3.8-Max.
- **What it does:** Qwen3.8-Max specializes in autonomous agentic computing, outperforming leading models on benchmarks for long-horizon enterprise tasks like software engineering and research automation.
- **Why it matters:** Its claimed benchmark leadership in agentic computing, coupled with a potential open-weight release, could significantly reshape the competitive landscape and accelerate enterprise adoption of autonomous AI.
- **Strategic view:** This release underscores the industry shift towards AI agents capable of end-to-end workflow automation, demanding C-level evaluation of integrated performance, deployment economics, and potential competitive disruption.

Asana's AI agents share memory across your company — but not your secrets

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Asana's Agentic Work Management (AWM) is an operating system for human-AI teams, leveraging its Work Graph for shared AI agent memory across the enterprise.
- **Who:** Asana, a leading work management platform provider, developed Agentic Work Management (AWM), an operating system for human-AI agent teams.
- **What it does:** AWM integrates AI agents with Asana's Work Graph, allowing them to share memory, view company goals, and update project statuses across the enterprise, unlike stateless copilots.
- **Why it matters:** This innovation matters by overcoming the limitation of stateless AI agents, enabling persistent memory and shared context across an entire organization for more effective collaboration.
- **Strategic view:** Asana strategically leverages its extensive Work Graph data and deep workflow expertise to build a defensible advantage for AWM against competing agent products from frontier model providers.

Trump's AI protectionism has come for robotics

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** The Trump administration is extending its AI protectionist policies to the nascent global robotics industry, specifically targeting the developing humanoid robot sector.
- **Who:** The Trump administration is implementing new protectionist measures that directly impact global robotics companies and the broader technology sector.
- **What it does:** These expanded protectionist policies introduce potential trade barriers, regulatory complexities, and increased domestic focus for companies developing advanced robotic technologies.
- **Why it matters:** This shift signals heightened geopolitical risks, requiring TMT companies to re-evaluate international supply chains and market strategies for emerging robotics investments.
- **Strategic view:** C-level executives should assess supply chain resilience, consider localized manufacturing, and anticipate increased domestic competition amid a growing trend of technology nationalism.
