3 deep-dives you should really read

Why prompt debt, retrieval debt, and evaluation debt are quietly reshaping enterprise AI risk

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** New forms of technical debt, encompassing prompt, retrieval, and evaluation issues, are subtly undermining enterprise AI systems with complex, distributed, and intermittent failure modes beyond traditional code problems.
- **Who:** Enterprise CIOs, CTOs, and product leaders in Telco, Media, and Tech sectors are directly grappling with these emerging AI debt challenges.
- **What it does:** AI debt causes projects to stall, inflates compute costs, generates inaccurate outputs, and erodes trust, significantly elevating AI project failure rates to over 90%.
- **Why it matters:** This accumulating debt renders AI systems brittle, unmaintainable, and prone to catastrophic failures, hindering reliable long-term business value delivery and productivity gains from AI investments.
- **Strategic view:** C-level executives must prioritize explicit AI debt reduction programs, integrating continuous evaluation, explainability, and prompt governance into system design to ensure sustainable AI platform reliability.

US's big bet on quantum computing may not be entirely legal

Ars Technica – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** The United States' substantial investment in quantum computing initiatives, including a new quantum foundry company, faces potential legal challenges regarding its foundational legality and necessity.
- **Who:** The United States government, private quantum computing companies, and legal or regulatory bodies are central to this unfolding strategic and policy debate.
- **What it does:** This news questions the legal basis of a significant US government push into quantum computing, potentially impacting the legitimacy and operational viability of a newly formed quantum foundry.
- **Why it matters:** It matters because legal uncertainties could significantly slow down critical quantum technology development, create regulatory risks, and deter private sector investment in the emerging quantum ecosystem.
- **Strategic view:** C-level executives should carefully evaluate the legal landscape and regulatory risks within quantum computing, as these factors will profoundly influence market entry, technology adoption, and competitive advantage.

Jaclyn Kagey Shapes Humanity's Return to the Moon

NASA – Breaking News · Topic: **AI/Cloud/Quantum**

- **What it is:** Jaclyn Kagey is leading the extravehicular activity preparations for NASA's Artemis missions, which aim to return humans to the Moon.
- **Who:** Jaclyn Kagey, NASA's Artemis extravehicular activity lead, is instrumental in preparing astronauts for safe and unprecedented lunar surface exploration.
- **What it does:** She defines operational procedures and safety protocols for astronauts to explore the Moon's South Pole, enabling critical scientific and exploratory advancements.
- **Why it matters:** This work directly enables humanity's first exploration of the Moon's South Pole, unlocking new scientific discoveries and paving the way for deep space missions.
- **Strategic view:** Lunar exploration drives profound innovation in communication infrastructure, data analytics, and advanced robotics, creating significant long-term growth opportunities across TMT industries.
