Researchers say they trained a foundation model from scratch for about \$1,500

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** HRM-Text is a novel foundation model architecture developed by Sapien that dramatically reduces the cost and data required for training advanced AI models from scratch.
- **Who:** Researchers at Sapien developed HRM-Text, an innovative Hierarchical Recurrent Model designed to overcome the computational inefficiencies of traditional Transformer-based LLMs.
- **What it does:** It allows organizations to train a 1B-parameter foundation model from scratch for approximately \$1,500 and 40 billion tokens, achieving competitive performance on key industry benchmarks.
- **Why it matters:** This innovation democratizes foundational AI pretraining, making it accessible and affordable for enterprises to develop highly capable, domain-specific reasoning models using their proprietary data.
- **Strategic view:** This empowers TMT enterprises to build proprietary, cost-efficient, and specialized AI reasoning cores internally, reducing vendor dependency and accelerating domain-specific innovation with sensitive data.

Surprise upset: GPT-5.5 beats Claude Fable 5 on brutal new Agents' Last Exam benchmark

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Agents' Last Exam (ALE) is a new, brutal benchmark designed by UC Berkeley researchers to assess AI agents' capability to execute economically valuable, long-horizon professional workflows.
- **Who:** Researchers from UC Berkeley, with 300+ experts, launched Agents' Last Exam (ALE), where OpenAI's GPT-5.5 surprisingly outperformed Anthropic's new Claude Fable 5 model.
- **What it does:** Agents' Last Exam (ALE) rigorously tests AI agents on complex, multi-step professional tasks within virtual environments, utilizing objective, code-based evaluation across 55 diverse industry domains.
- **Why it matters:** This benchmark accurately measures AI agents' ability to perform real-world, GDP-relevant tasks, revealing that even leading models like GPT-5.5 still have a remarkably low pass rate.
- **Strategic view:** C-level executives must understand that while AI progresses, achieving reliable, high-performance agentic automation for complex enterprise tasks still requires significant development and realistic implementation timelines.

MassMutual's AI strategy: 12-month contracts, 30% productivity gains, zero lock-in

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** MassMutual's dynamic AI strategy prioritizes optionality and agility by using short-term vendor contracts and flexible infrastructure to quickly swap models as technology evolves.
- **Who:** MassMutual's CIO Sears Merritt is leading the company in adopting a pragmatic, user-centric AI strategy across its development and customer service operations.
- **What it does:** The strategy implements 12-month contracts and modular AI infrastructure, enabling continuous model updates while integrating user feedback through a unique "trust score" framework.
- **Why it matters:** This approach yields substantial productivity gains of 30% and dramatically reduces contact center resolution times from ten minutes to one, lowering operational costs significantly.
- **Strategic view:** TMT executives should adopt similar agile AI frameworks to mitigate technology lock-in and continuously optimize performance, balancing cost with crucial user experience and quality insights.
