3 deep-dives you should really read

Architecting memory and storage in the AI era

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** The text describes the emergence of the AI inference era, driven by advanced infrastructure powering continuous intelligence for real-time services.
- **Who:** Organizations in healthcare, customer service, and other sectors are deploying intelligent systems that rely on sophisticated underlying technology.
- **What it does:** This advanced infrastructure analyzes millions of data points in real time to accelerate research and instantly resolve complex customer needs.
- **Why it matters:** It matters because it enables significant real-world breakthroughs and powers critical real-time services, essential for modern data-driven operations.
- **Strategic view:** TMT executives must prioritize strategic investment in robust memory and storage infrastructure to harness AI inference for competitive advantage and service innovation.

The Download: selling battlefield drone data and AI reshaping language

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** A nascent, unregulated marketplace is emerging for sensitive battlefield drone data collected from conflict zones, creating a 'Wild West' scenario.
- **Who:** Various actors, including academic researchers like Cory Alpert and unnamed commercial or defense entities, are participating in or influenced by this data exchange.
- **What it does:** This marketplace monetizes valuable tactical intelligence from warzones, generating new revenue streams while raising complex ethical, privacy, and national security concerns.
- **Why it matters:** It signals a profound shift in data monetization and governance, impacting global security, ethical AI development, and future intelligence gathering strategies.
- **Strategic view:** TMT executives must prepare for novel data exploitation models, evolving cybersecurity threats, and the critical need for ethical AI frameworks in sensitive intelligence contexts.

Data from drones in Ukraine is fueling a new Wild West marketplace

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** Data collected from drones used in Ukrainian battlefields is creating an emerging, unregulated marketplace for defense intelligence and technological insights.
- **Who:** Defense companies, intelligence agencies, and technology developers are the primary beneficiaries and players in this burgeoning, data-driven ecosystem.
- **What it does:** It establishes a dynamic, unregulated commercial pipeline for valuable military intelligence and advanced drone technology development from real-world combat data.
- **Why it matters:** This new marketplace signifies a profound shift in military intelligence gathering and technology innovation, driven by battlefield-generated data's enduring value.
- **Strategic view:** Executives should assess emerging opportunities in secure data infrastructure, AI analytics, and ethical data governance for lucrative defense and intelligence sector engagements.
