Alibaba's proprietary Qwen3.7-Max can run for 35 hours autonomously and supports external harnesses like Anthropic's Claude Code

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Alibaba's proprietary Qwen3.7-Max is an advanced AI model engineered for long-horizon autonomous agentic execution, capable of performing complex tasks for over 35 hours continuously.
- **Who:** Developed by Alibaba's Qwen Team, this proprietary AI model competes directly with leading Western generative AI companies, showcasing China's advanced AI capabilities.
- **What it does:** Qwen3.7-Max autonomously executes complex, multi-day tasks, demonstrating superior long-horizon reasoning by achieving significant engineering speedups and outperforming rivals on key benchmarks.
- **Why it matters:** This model signifies the maturation of the AI agent era, providing enterprises unprecedented long-duration automation capabilities and intense competition against established Western frontier models.
- **Strategic view:** TMT executives should note Alibaba's strategic shift towards proprietary, high-performance AI agents offering competitive alternatives to Western models, albeit with potential geo-political and data sovereignty considerations.

Your AI agents need a terminal, not just a vector database

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Direct Corpus Interaction (DCI) is a novel technique allowing AI agents to directly search raw data using standard command-line tools, bypassing traditional vector embeddings.
- **Who:** Researchers from multiple universities proposed Direct Corpus Interaction (DCI) to enhance AI agent search capabilities beyond the limitations of vector databases.
- **What it does:** DCI enables AI agents to directly interact with raw, dynamic data sources using terminal-like commands, facilitating precise, multi-step information retrieval and reasoning.
- **Why it matters:** DCI significantly improves AI agent accuracy and reduces costs by enabling exact evidence localization and dynamic search in real-time, evolving enterprise data environments.
- **Strategic view:** Implementing DCI can drastically enhance operational AI efficiency, reliability, and security across TMT sectors by ensuring agents access real-time, accurate data for critical analytical tasks.

A 0.12% parameter add-on gives AI agents the working memory RAG can't

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Delta-mem is an innovative, lightweight add-on that provides AI agents with continuous, dynamically updated working memory by compressing historical interaction data into a fixed-size matrix.
- **Who:** Researchers from Mind Lab and several universities developed delta-mem to enhance AI agent performance for enterprise applications where long-running, multi-step interactions are common.
- **What it does:** It enables AI models to efficiently accumulate and reuse past interactions, resolving the limitations of expanding context windows or relying on expensive, complex external retrieval augmentation systems (RAG).
- **Why it matters:** This breakthrough significantly reduces token costs, improves latency, and creates more reliable AI agent workflows by offering superior memory recall and adaptability compared to current methods.
- **Strategic view:** TMT executives should view delta-mem as a critical enabler for scaling advanced AI agent deployments, driving operational efficiency, and unlocking new, complex interactive service offerings with reduced infrastructure costs.
