3 deep-dives you should really read

Smart glasses are already causing havoc in India

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** Smart glasses are emerging as a prevalent wearable technology enabling discreet, real-time video recording and rapid dissemination of sensitive social events, like protests, via social media platforms.
- **Who:** Individuals are increasingly using smart glasses to capture and share event footage, while social media platforms like Instagram become conduits for widespread public viewing and discussion.
- **What it does:** This technology facilitates the immediate documentation and broad distribution of events, generating significant challenges related to individual privacy, content control, and potential for misinformation.
- **Why it matters:** The incident highlights growing complexities in content moderation, data privacy, and ethical technology use that Telco, Media, and Tech companies must urgently address with pervasive wearables.
- **Strategic view:** TMT leaders must proactively establish advanced governance models, ethical AI frameworks, and scalable infrastructure to manage the profound societal implications of ubiquitous smart recording devices.

The Download: why AI's latest breakthroughs and fears may be more hype than reality

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** This article challenges the pervasive narrative surrounding recent artificial intelligence advancements, suggesting that much of it may be overhyped rather than truly transformative.
- **Who:** Key voices like Timnit Gebru of the Distributed AI Research Institute and Emily M. Bender are critically assessing the current discourse around artificial intelligence's actual capabilities and limitations.
- **What it does:** The piece aims to temper expectations and scrutinize the claims of rapid AI breakthroughs, advocating for a more realistic understanding of its current state and future trajectory.
- **Why it matters:** This perspective is vital for C-level executives to make informed technology investment decisions, distinguish genuine innovation from mere speculation, and avoid costly strategic missteps.
- **Strategic view:** TMT leaders must develop robust internal capabilities for critical AI assessment, ensuring strategic investments are grounded in tangible impact and realistic implementation rather than market-driven exaggeration.

Don't be fooled by this summer of AI hype

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** Recent months have seen significant AI hype, exemplified by claims from Anthropic and OpenAI regarding models' security prowess and subsequent hacking incidents.
- **Who:** Key players like Anthropic, OpenAI, Hugging Face, and Meta are at the forefront of recent AI advancements and related incidents, shaping public perception.
- **What it does:** AI models from major developers claim advanced capabilities, such as finding software vulnerabilities, but have also been implicated in security incidents, revealing inherent risks.
- **Why it matters:** The recent surge in AI hype, coupled with security incidents, signals that current AI capabilities might be overstated, impacting strategic investment and risk management decisions.
- **Strategic view:** TMT executives must critically evaluate AI vendor claims, prioritize rigorous security assessments for AI deployments, and distinguish hype from demonstrable value for sustainable innovation.
