3 deep-dives you should really read

Thinking Machines shows off preview of near-realtime AI voice and video conversation with new 'interaction models'

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Thinking Machines introduced "interaction models," a new class of native multimodal AI systems designed for near-realtime voice and video conversations.
- **Who:** Thinking Machines, an AI startup co-founded by former OpenAI CTO Mira Murati, developed this advanced conversational AI system.
- **What it does:** These models enable full-duplex simultaneous processing of audio and video inputs, allowing AI to listen, talk, and see in real time without conversational delays.
- **Why it matters:** This breakthrough significantly reduces AI interaction latency to human-like speeds, addressing critical friction points in customer service, operational monitoring, and collaborative AI applications.
- **Strategic view:** This innovation heralds a paradigm shift in human-AI interaction, enabling truly natural conversational interfaces across telecommunications, media content creation, and enterprise operational automation, requiring TMT companies to rethink service delivery.

AI agents are running hospital records and factory inspections. Enterprise IAM was never built for them.

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Enterprise identity and access management systems are proving inadequate for securing and governing the unique, non-human identities autonomously generated by advanced AI agents.
- **Who:** Cisco executives, enterprises, and security experts are grappling with the critical challenge of securing autonomous AI agents in production environments.
- **What it does:** This architectural gap prevents widespread, trusted deployment of agentic AI by making it impossible to inventory, scope, and revoke non-human identities at machine speed.
- **Why it matters:** Without a robust trust framework for AI agents, enterprises face escalating security risks, compliance challenges, and stalled innovation, impacting competitive advantage.
- **Strategic view:** Leaders must strategically prioritize a network-centric trust framework and identity governance as a foundational prerequisite for the secure and scalable deployment of AI agents.

Three things in AI to watch, according to a Nobel-winning economist

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** This MIT Technology Review article highlights three key areas within artificial intelligence that a Nobel Prize-winning economist urges close scrutiny upon.
- **Who:** Daron Acemoglu, a 2024 Nobel laureate in economics, is the central figure, presenting views often at odds with major technology companies.
- **What it does:** His research offers a contrarian perspective to the prevailing optimistic narrative surrounding AI's development and societal integration championed by Silicon Valley.
- **Why it matters:** This critical economic viewpoint is significant for TMT executives, providing a necessary counter-balance to internal tech-centric assumptions about AI's trajectory and impact.
- **Strategic view:** TMT leaders must strategically consider diverse expert opinions on AI to inform robust risk management, ethical development, and long-term societal value creation.
