OCSF explained: The shared data language security teams have been missing

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** OCSF is an open-source framework for cybersecurity schemas, providing a vendor-neutral, common language for security teams to represent events, findings, and context across diverse tools.
- **Who:** Originally launched by AWS and Splunk, OCSF is now a widely adopted open-source standard supported by hundreds of leading security vendors, enterprises, and practitioners within the Linux Foundation.
- **What it does:** OCSF provides a standardized, common data language for security events and telemetry, enabling consistent threat detection, investigation, and analytics across disparate security products and diverse data sources.
- **Why it matters:** It addresses the industry's critical need for interoperability, eliminating time-consuming data normalization from disparate tools and significantly enhancing the efficiency of security operations centers.
- **Strategic view:** OCSF's emergence as an industry standard fundamentally reshapes cybersecurity by enabling cohesive, scalable security architectures, which is critical for mitigating escalating AI-driven threats and streamlining compliance across complex TMT ecosystems.

NASA Answers Your Most Pressing Artemis II Questions

NASA – Breaking News · Topic: **AI/Cloud/Quantum**

- **What it is:** NASA's Artemis II is the inaugural crewed test flight, sending four astronauts around the Moon to evaluate Orion spacecraft systems in deep space.
- **Who:** NASA, in collaboration with the Canadian Space Agency, is conducting this mission with astronauts Reid Wiseman, Victor Glover, Christina Koch, and CSA astronaut Jeremy.
- **What it does:** This mission tests the Orion spacecraft's operational capabilities and life support systems in the challenging deep space environment for future lunar and beyond missions.
- **Why it matters:** Artemis II signifies a crucial step toward returning humans to the Moon, validating technologies and operational procedures vital for sustained lunar presence and deep space exploration.
- **Strategic view:** This mission paves the way for new commercial opportunities in space infrastructure, media content creation, advanced technology development, and data services for a burgeoning lunar economy.

Illuminated in Orion

NASA – Breaking News · Topic: **AI/Cloud/Quantum**

- **What it is:** NASA astronaut Christina Koch and CSA astronaut Jeremy Hansen are photographed inside the dimly lit Orion crew capsule during an upcoming mission.
- **Who:** The image features NASA astronaut Christina Koch and Canadian Space Agency astronaut Jeremy Hansen inside the Orion spacecraft.
- **What it does:** The photo shows astronauts relaxing and observing from inside the Orion capsule, with lights off to prevent window glare.
- **Why it matters:** This image previews human presence within the Orion capsule, highlighting ongoing preparations for future deep-space exploration missions.
- **Strategic view:** This upcoming mission signals growing demand for advanced space communications, AI-driven operations, and immersive media content, creating significant long-term market opportunities across Telco, Media, and Tech sectors.
