AI Leaders Are Calling for a Slowdown. Trump's Team Says It's on Them

Wired – Business · Topic: **AI/Cloud/Quantum**

- **What it is:** Prominent artificial intelligence industry leaders are publicly advocating for a slowdown and increased regulatory oversight of AI development, citing potential risks.
- **Who:** Key AI industry figures like Sam Altman, Elon Musk, and Anthropic CEO Dario Amodei are engaging with the US White House on AI regulation.
- **What it does:** These leaders are requesting a pause or stricter governmental control over advanced AI development, a proposition currently resisted by the US administration.
- **Why it matters:** This highlights growing industry apprehension about AI's uncontrolled trajectory, signaling potential future policy battles impacting technological innovation and deployment strategies across TMT.
- **Strategic view:** TMT executives should prepare for an intensifying regulatory debate, balancing innovation velocity with ethical concerns, as government engagement will critically shape AI's long-term market landscape.

The AI industry has taken a doomer turn. What now?

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** Anthropic CEO Dario Amodei released an essay advocating for a slowdown in large language model development, citing potential existential risks and societal dangers.
- **Who:** Dario Amodei, CEO of AI firm Anthropic, is a prominent figure advocating for a more cautious approach to artificial intelligence development.
- **What it does:** This essay directly advocates for slowing down the rapid advancement of large language models due to perceived safety risks and potential societal disruption.
- **Why it matters:** This prominent call for caution by an industry leader signals a growing internal debate about AI safety, potentially influencing regulatory discussions and development timelines.
- **Strategic view:** TMT executives must strategically prepare for potential regulatory shifts, increased public scrutiny, and a re-prioritization of ethical AI development over unchecked innovation.

Donated livers can be made biologically younger

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** A novel medical technique has emerged that can rejuvenate donated livers, making them biologically younger to significantly extend their viability for transplantation.
- **Who:** Medical teams are developing advanced organ preservation techniques that move beyond traditional cold storage to extend viability and improve outcomes.
- **What it does:** This innovation actively reverses the biological aging process in donated livers, making them more robust and extending the critical window for transplantation.
- **Why it matters:** It significantly increases the pool of viable organs, reduces transplant urgency, and improves recipient outcomes by offering healthier, longer-lasting donor organs.
- **Strategic view:** This breakthrough highlights the growing convergence of biotech and advanced medical technology, creating new investment avenues in life sciences infrastructure and personalized healthcare solutions.
