3 deep-dives you should really read

Building the materials foundation for AI

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** The rapid expansion of artificial intelligence is now confronting a significant foundational challenge rooted in the physical materials essential for its underlying computing infrastructure.
- **Who:** This critical materials challenge primarily impacts AI developers, computing infrastructure providers, and operators of semiconductor manufacturing and data centers.
- **What it does:** It necessitates urgent innovation in new materials as current semiconductors and data centers near their physical limits regarding performance, thermal management, and electrical efficiency.
- **Why it matters:** The availability of advanced materials is becoming as crucial as the algorithms themselves for sustaining AI's growth, performance, and long-term reliability.
- **Strategic view:** TMT executives must strategically invest in foundational material science research and development to overcome physical barriers and ensure the sustained scalability and efficiency of future AI infrastructure.

Chipotle Is Working With Palantir to Track Food Safety Risks

Wired – Business · Topic: **AI/Cloud/Quantum**

- **What it is:** Chipotle is deploying a comprehensive data analytics platform to proactively manage and mitigate food safety risks across its operations.
- **Who:** The collaboration involves Chipotle, a major restaurant chain, partnering with Palantir, a leading provider of data integration and analytics software.
- **What it does:** The platform monitors various risk factors including pest incidents, employee illnesses, and other operational data to enhance food safety protocols nationwide.
- **Why it matters:** This initiative directly responds to previous food safety challenges, aiming to restore consumer trust and prevent future costly incidents for the brand.
- **Strategic view:** This partnership exemplifies how advanced data analytics and AI platforms are becoming critical for operational resilience and brand reputation across diverse consumer-facing industries.

Meet a mouse whose brain cortex is made up of human cells

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** Researchers successfully developed a novel mouse model where nearly half its brain volume comprises integrated human brain cells, enabling direct observation of human neuronal function in vivo.
- **Who:** Leading biomedical researchers and neuroscientists are pioneering complex interspecies brain tissue integration to study human brain development and disease.
- **What it does:** This technology enables the detailed tracking and study of human brain cell activity and integration within a living organism, offering unprecedented insights into neurological processes.
- **Why it matters:** This breakthrough provides an unparalleled biological model for understanding human brain function, disease mechanisms, and potential therapeutic interventions without human experimentation.
- **Strategic view:** This research signals accelerating biotech convergence with AI and advanced computing, demanding strategic foresight on data infrastructure, ethical governance, and the profound implications for future human-machine interfaces.
