3 deep-dives you should really read

Microsoft launches new in-house AI models it says cut costs up to 89% versus OpenAI

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Microsoft AI launched new in-house models, MAI-Image-2.5-Pro and MAI-Voice-2-Flash, designed for high-fidelity image generation and high-volume enterprise speech.
- **Who:** Microsoft AI's Superintelligence team developed and launched these proprietary image and voice generation models for public preview and internal product integration.
- **What it does:** These models significantly reduce GPU costs by up to 89% while improving performance, speed, and accuracy across Microsoft's internal products like Bing, PowerPoint, and Dynamics 365.
- **Why it matters:** It matters because Microsoft is aggressively demonstrating its ability to develop and deploy high-performing, cost-effective in-house AI, reducing reliance on external partners and optimizing its cloud infrastructure.
- **Strategic view:** This move signals Microsoft's aggressive vertical integration of AI, establishing proprietary, cost-optimized models as a viable alternative to external providers, profoundly impacting cloud economics and AI adoption strategies for TMT companies.

Multi-turn attacks broke AI models 88% of the time — single-turn testing missed it, Cisco AI security lead warns at VB Transform 2026

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Cisco research reveals multi-turn adversarial attacks compromise leading AI models up to 88% of the time, indicating single-turn testing is critically insufficient for robust security.
- **Who:** Cisco's AI threat intelligence team, along with security vendors like Palo Alto Networks, CrowdStrike, and enterprises such as Box and Intuit, are actively addressing this vulnerability.
- **What it does:** This finding demonstrates that current AI security practices and red-teaming programs fail to protect against realistic, adaptive conversational attacks, leading to agent security incidents.
- **Why it matters:** The widespread vulnerability of AI models to sophisticated multi-turn attacks creates significant operational, data, and reputational risks for enterprises relying on AI agents.
- **Strategic view:** C-suite executives must urgently implement comprehensive AI security frameworks, multi-turn testing, and foundational identity and isolation controls to proactively manage emerging AI agent risks.

Black Forest Labs launches FLUX 3 capable of generating images and 20-second video with audio — but in limited release to start

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Black Forest Labs launched FLUX 3, a multimodal AI model that generates images and 20-second video with audio from prompts, extending to robotic vision and actions.
- **Who:** Black Forest Labs, a German AI development company, has launched FLUX 3, expanding its generative AI offerings beyond images to include video with audio.
- **What it does:** FLUX 3 generates images and 20-second video clips with native audio from a single prompt, unifying creative content, simulation, and robotic applications with visual intelligence.
- **Why it matters:** FLUX 3 matters as a multimodal frontier model demonstrating strong video generation capabilities against competitors, aiming to unify creative, simulation, and robotic applications.
- **Strategic view:** Executives should assess FLUX 3's potential to integrate visual AI across content creation, automation, and robotics, monitoring its enterprise rollout despite limited initial access and lacking commercial details.
