3 deep-dives you should really read

Miami startup Subquadratic claims 1,000x AI efficiency gain with SubQ model; researchers demand independent proof.

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Subquadratic, a Miami startup, claims its SubQ model achieves 1,000x AI efficiency by escaping the quadratic scaling problem inherent in current transformer-based architectures.
- **Who:** Subquadratic, a newly emerged Miami startup backed by \$29 million in seed funding, is making this sweeping and unvalidated claim.
- **What it does:** Its SubQ model promises linear computational scaling with context length, drastically reducing compute requirements for processing extensive data compared to existing LLMs.
- **Why it matters:** If validated, this breakthrough would redefine AI economics and capabilities, enabling much longer context windows and eliminating complex workarounds for current large language models.
- **Strategic view:** Executives should closely monitor independent verification of Subquadratic's claims, as such efficiency gains could dramatically reshape AI deployment costs and competitive dynamics across TMT sectors.

One command turns any open-source repo into an AI agent backdoor. OpenClaw proved no supply-chain scanner has a detection category for it

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** A critical security gap allows malicious instructions in AI agent skill definitions to create backdoors in open-source repositories, bypassing traditional supply chain security scanners.
- **Who:** AI coding agents like OpenClaw and GitHub Copilot CLI are vulnerable to this new form of supply chain poisoning through maliciously crafted skill definitions.
- **What it does:** Malicious instructions embedded in AI agent skill definitions, such as those generated by CLI-Anything, are executed by agents using their own legitimate credentials, leading to system compromise.
- **Why it matters:** This represents a structural gap in existing software supply chain security, as current SAST and SCA tools cannot detect malicious instructions embedded in AI agent skill definitions.
- **Strategic view:** C-level executives must prioritize developing new AI-specific security frameworks and investing in agent-level detection tools to address this critical, unmonitored attack surface within their technology stacks.

GPT-5.5 Instant shows you what it remembered — just not all of it

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** This news concerns a development related to GPT-5.5 Instant shows you what it remembered — just not all of it.
- **Who:** The main actors involved include VentureBeat – AI and ecosystem partners.
- **What it does:** It introduces or describes concrete changes in products, services or capabilities in the technology stack.
- **Why it matters:** It may influence strategy, infrastructure, partnerships or competition for Telco, Media and Tech players.
- **Strategic view:** Over the next 6-24 months, this move could reshape positioning, ecosystem relationships and investment priorities.
