## 3 deep-dives you should really read

### 'I Like My Big Rat Wife': Meet the People Using Chatbots to Write Custom Fiction

Wired – Business · Topic: **AI/Cloud/Quantum**

- **What it is:** It describes individuals leveraging AI chatbots to generate highly personalized fictional content directly for their own unique consumption and specific preferences.
- **Who:** This involves individual readers as new content creators, AI platform developers, and traditional media and publishing companies facing disruption from this trend.
- **What it does:** This trend enables consumers to bypass established content creation pipelines, facilitating the production of deeply niche and tailored narratives on demand.
- **Why it matters:** It signifies a profound shift in consumer behavior, moving from passive consumption to active, personalized content generation, impacting traditional media value chains.
- **Strategic view:** This underscores the accelerating demand for scalable AI tools supporting user-generated content, pushing TMT firms to adapt platforms, infrastructure, and monetization for hyper-personalization.

### FLEX and Sentinel-3C ready for liftoff on Vega-C

ESA – European Space Agency · Topic: **Space/Infra**

- **What it is:** The European Space Agency (ESA) is launching two advanced Earth observation satellites, FLEX and Sentinel-3C, aboard a Vega-C rocket from French Guiana.
- **Who:** The European Space Agency (ESA) is deploying these satellites as part of the broader Copernicus Earth observation program using its Vega-C launch vehicle.
- **What it does:** These advanced satellites are designed to significantly enhance global Earth observation capabilities, providing critical data for environmental monitoring and scientific research.
- **Why it matters:** This launch is crucial for augmenting Europe's independent capacity for comprehensive Earth observation, delivering vital data for climate science and environmental management.
- **Strategic view:** For TMT, this reinforces the strategic importance of European space infrastructure, offering potential for new data analytics services and fostering digital sovereignty in Earth intelligence.

### ESA's FLEX mission reveals the secret glow of plants

ESA – European Space Agency · Topic: **Space/Infra**

- **What it is:** ESA's Fluorescence Explorer (FLEX) is a satellite mission designed to detect the invisible, faint glow emitted by plants during photosynthesis from space.
- **Who:** The European Space Agency (ESA) is launching the FLEX mission, which will provide scientists with novel data on global plant health and activity.
- **What it does:** FLEX will use its highly sensitive FLORIS instrument to map plant fluorescence globally, revealing how vegetation utilizes sunlight and responds to environmental stressors like drought.
- **Why it matters:** This mission matters because it will improve understanding of vegetation's response to climate change, including drought effects, and enhance knowledge of global carbon and water cycles.
- **Strategic view:** This initiative strategically highlights the increasing demand for advanced satellite-based environmental intelligence, fostering new opportunities in data analytics, climate modeling, and resilient infrastructure development for TMT.
