3 deep-dives you should really read

The Download: a "God-driven" cryptocurrency and a solar engineering roadmap

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** This news details a fraudulent cryptocurrency scheme where investors lost significant funds after being told the digital asset was divinely inspired.
- **Who:** The perpetrators are Eli Regalado and his wife, who claimed divine instruction to promote and sell a cryptocurrency to unsuspecting investors.
- **What it does:** Regalado and his wife allegedly defrauded investors by selling a cryptocurrency they claimed was directed by God, resulting in substantial financial losses for participants.
- **Why it matters:** This incident underscores the critical need for regulatory oversight in the cryptocurrency market and exposes the potential for exploitation through deceptive religious claims.
- **Strategic view:** TMT executives must prioritize robust platform governance to combat financial fraud and disinformation exploiting emerging technologies, protecting user trust and brand reputation.

Powering AI is an architecture problem

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** This article highlights that reliable power supply for large AI data centers is a significant architectural challenge for existing grid infrastructure, as evidenced by recent outages.
- **Who:** Data center operators, AI companies, and power grid providers are grappling with the architectural limitations of current power infrastructure to meet AI demands.
- **What it does:** It describes recent power outages in major data center hubs, like Ashburn, highlighting critical grid failures that instantly disrupted massive computational loads for AI.
- **Why it matters:** The growing power demands of AI are exposing fundamental architectural weaknesses in existing electrical grids, posing significant risks to future AI scalability and reliability.
- **Strategic view:** TMT leaders must strategically prioritize resilient, distributed power architectures and collaborate with energy providers to secure scalable, reliable infrastructure for AI's future.

This road map could help us decide whether to deploy solar geoengineering

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** A comprehensive road map outlines the necessary research, experiments, and infrastructure for evaluating solar geoengineering technologies to address climate change.
- **Who:** A San Francisco nonprofit organization developed and published this detailed framework, drawing on decades of scientific exploration into climate intervention strategies.
- **What it does:** This road map provides a structured pathway for decision-makers to assess the feasibility, risks, and benefits of solar geoengineering before potential deployment.
- **Why it matters:** It is crucial for guiding global discussions and potential actions on climate change mitigation, offering a systematic approach to a controversial but powerful technology.
- **Strategic view:** TMT executives should monitor this foundational work for future technology investment in climate solutions and long-term societal infrastructure implications.
