## 3 deep-dives you should really read

### Microsoft and OpenAI gut their exclusive deal, freeing OpenAI to sell on AWS and Google Cloud

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Microsoft and OpenAI have significantly revised their exclusive partnership agreement, making the intellectual property license non-exclusive and allowing OpenAI to offer its products across all major cloud platforms.
- **Who:** Microsoft, a major cloud provider and investor, along with OpenAI, a leading AI model developer, are the core parties involved in this significant partnership restructuring.
- **What it does:** This agreement abolishes Microsoft's previous exclusive commercial access to OpenAI's models via Azure and liberates OpenAI to directly offer its services on rival cloud platforms like AWS and Google Cloud.
- **Why it matters:** This overhaul dismantles a cornerstone exclusive AI partnership, granting OpenAI crucial multi-cloud flexibility and intensifying competition among cloud providers for AI enterprise customers and broader market share.
- **Strategic view:** This signals a strategic shift towards a more open and competitive AI ecosystem, compelling TMT C-levels to reassess their cloud infrastructure, AI integration strategies, and potential partnerships in a multi-cloud environment.

### Why supply chains are the proving ground for automation-led iPaaS

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Automation-led iPaaS is a next-generation cloud platform leveraging AI to manage integrations as living workflows, designed to absorb constant change without rewriting the underlying technology stack.
- **Who:** C-level executives and supply chain leaders in global enterprises facing immense operational volatility, expanding partner networks, and the crippling costs of legacy integration models are the primary audience.
- **What it does:** It rapidly onboards partners, automates data mapping with AI, streamlines complex integration workflows, and supports real-time data exchange across diverse systems, minimizing manual effort and disruption.
- **Why it matters:** This technology matters because it allows enterprises to swiftly adapt to extreme supply chain volatility, reduce integration costs, mitigate operational risks, and maintain continuous business operations despite constant change.
- **Strategic view:** TMT executives should view iPaaS as a foundational capability for enabling AI-driven automation, seamless ecosystem integration, and agile service delivery across their own complex, evolving operational landscapes, beyond just supply chains.

### New AI framework autonomously optimizes training data, architectures and algorithms — outperforming human baselines

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** ASI-EVOLVE is an advanced AI framework autonomously optimizing the entire AI research and development cycle, from data curation to model architecture and algorithm design.
- **Who:** This innovative self-improving AI framework was developed by researchers at SII-GAIR, specifically the Generative Artificial Intelligence Research Lab.
- **What it does:** The system continuously learns and experiments, autonomously discovering novel AI designs and significantly outperforming human-engineered baselines in data optimization, architecture, and algorithms.
- **Why it matters:** It matters by eliminating manual bottlenecks in AI development, allowing enterprises to create more performant and efficient AI systems rapidly and at a lower engineering cost.
- **Strategic view:** This breakthrough enables TMT firms to accelerate AI innovation, achieve superior model performance with reduced R&D expenditure, and gain a significant competitive edge through autonomous AI development.
