## 3 deep-dives you should really read

### A Stealth Startup Thinks It Just Hacked the Memory Shortage

Wired – Business · Topic: **AI/Cloud/Quantum**

- **What it is:** Kepler Computing introduces a novel chip design methodology paired with a proprietary material aimed at revolutionizing memory architecture for AI.
- **Who:** Kepler Computing, a stealth startup, is pioneering an innovative solution to address critical memory supply chain constraints.
- **What it does:** This innovation seeks to alleviate the severe supply chain bottlenecks and escalating costs currently plaguing the high-demand memory market.
- **Why it matters:** It matters because addressing memory bottlenecks is crucial for scaling AI infrastructure and managing capital expenditures across TMT industries.
- **Strategic view:** This approach could strategically redefine AI hardware economics, accelerate widespread AI adoption, and diversify critical component supply chains across technology sectors.

### Healthcare AI's next test is integration

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** Major artificial intelligence companies are actively entering the healthcare industry, deploying advanced technological capabilities to process and interpret vast amounts of medical data.
- **Who:** Leading AI technology firms are the primary actors, bringing their sophisticated models and computational expertise into the complex and data-rich healthcare ecosystem.
- **What it does:** These AI models can efficiently process long clinical records, interpret complex medical terminology, compare documentation against evidence, and generate coherent summaries for various healthcare professionals.
- **Why it matters:** This significant development accelerates the technical foundation available to the healthcare industry, enhancing operational efficiency and providing critical support for clinicians, operators, and administrative teams.
- **Strategic view:** This convergence underscores emerging cross-industry opportunities in data platforms, specialized AI services, and vertical integration, compelling TMT executives to consider new partnership models and competitive threats in high-value sectors.

### God told them to sell crypto. Their investors lost everything.

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** This news describes a fraudulent cryptocurrency scheme where its creator, Eli Regalado, falsely claimed divine guidance to sell a digital coin, leading to total investor loss.
- **Who:** The primary actors involved are Eli Regalado, who allegedly created and promoted a cryptocurrency called INDXcoin, and the numerous unsuspecting investors who lost their capital.
- **What it does:** This scheme exemplifies how a lack of regulation in emerging financial sectors can enable individuals to perpetrate significant fraud, causing complete financial devastation for investors.
- **Why it matters:** It critically matters as it showcases the profound risks and investor vulnerabilities prevalent in poorly regulated digital asset markets, demanding urgent attention from financial authorities.
- **Strategic view:** For TMT executives, this highlights increasing regulatory scrutiny on digital platforms, the imperative for robust consumer protection, and the severe reputational risks associated with unverified financial products.
