## 3 deep-dives you should really read

### The enterprise risk nobody is modeling: AI is replacing the very experts it needs to learn from

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** AI's rapid deployment is displacing human experts across knowledge-intensive sectors, paradoxically eroding the critical human evaluation and feedback loops essential for AI's continuous, reliable improvement.
- **Who:** Telco, Media, and Tech companies heavily investing in and deploying AI solutions, along with the human domain experts whose foundational roles are being automated.
- **What it does:** This displacement systematically reduces the pool of skilled human evaluators and practitioners, diminishing the capacity for high-quality feedback that AI systems require to learn and adapt in dynamic, complex environments.
- **Why it matters:** This unmodeled risk threatens future AI reliability and innovation, as the deep, unwritten knowledge necessary for validating and advancing AI capabilities may silently atrophy or disappear entirely.
- **Strategic view:** Executives must proactively address this critical evaluation gap by investing in new human-AI collaboration models or developing robust, reliable AI self-correction mechanisms to safeguard long-term expertise and system integrity.
