Forget typosquatting; slopsquatting is the software supply chain threat created by AI coding tools

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Slopsquatting is an emerging software supply chain attack exploiting AI coding assistant hallucinations to inject malicious code into development workflows.
- **Who:** Cybercriminals exploit AI coding assistants used by developers to introduce malicious software packages into enterprise development pipelines.
- **What it does:** AI models hallucinate fictitious package names; threat actors register these names with malware, which then gets unknowingly incorporated into developer codebases.
- **Why it matters:** This novel attack vector bypasses existing typosquatting protections, allowing widespread, long-term, and undetected malware injection into critical software supply chains.
- **Strategic view:** Executives must implement stringent automated validation for AI-generated code and dependencies to mitigate slopsquatting risks and secure the enterprise software supply chain.
