3 deep-dives you should really read

Canva launches Code 2.0, offering AI website building to every user — including free accounts

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** Canva Code 2.0 is an AI-powered tool enabling all Canva users, including free accounts, to build interactive websites and apps easily from plain language prompts.
- **Who:** Canva, with its quarter-billion-user design ecosystem, is targeting non-technical users, brands, and teams with this new AI-powered website building capability.
- **What it does:** It allows non-technical users to build interactive websites and apps via AI prompts, then visually edit them with drag-and-drop ease, integrating seamlessly into existing design projects.
- **Why it matters:** This launch democratizes interactive web and app creation for a massive non-technical user base, significantly lowering the barrier for high-quality, visually appealing digital experiences.
- **Strategic view:** Canva strategically transforms into a pivotal 'finishing layer' for AI-generated code, leveraging its vast user base and design expertise to dominate the visual quality aspect of interactive digital asset creation.

1Password moves into AI cost management, betting that token spend is the next enterprise budget crisis

VentureBeat – AI · Topic: **AI/Cloud/Quantum**

- **What it is:** 1Password launched AI Spend and Consumption Management, an integrated capability in its SaaS Manager providing real-time visibility into enterprise AI service consumption and spending from major vendors like OpenAI.
- **Who:** 1Password, traditionally known for password management, is expanding its identity security and SaaS governance platform for enterprise buyers with this new offering.
- **What it does:** This new capability offers IT and finance teams a unified, real-time dashboard to monitor, manage, and control AI service token consumption and spending across various vendors.
- **Why it matters:** It addresses the emerging enterprise budget crisis of unmanaged, consumption-based AI token spend, a challenge analogous to early cloud infrastructure cost management, requiring new dedicated tools.
- **Strategic view:** This move strategically positions 1Password to capture a significant share of the nascent AI FinOps market, enabling enterprises to control burgeoning AI costs and optimize their strategic investments in artificial intelligence.

PsiQuantum has a plan to make a massive quantum computer out of light

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** PsiQuantum is developing a massive photonic quantum computer, designed for practical, real-world computational challenges using light-based technology.
- **Who:** PsiQuantum is a leading quantum computing firm advancing a unique approach to build an fault-tolerant, utility-scale quantum computer using photonics.
- **What it does:** This ambitious project aims to create a quantum computing system with unprecedented scale and power, capable of solving problems intractable for even classical supercomputers.
- **Why it matters:** This initiative matters by promising to deliver a transformative quantum computer with the potential to revolutionize industries from healthcare to finance through its computational capabilities.
- **Strategic view:** TMT executives must recognize this as a critical leap in quantum technology, indicating imminent disruption and the need for early strategic planning and investment in quantum readiness.
