3 deep-dives you should really read

This implant can restore sight for patients with macular degeneration

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** The Prima system is an innovative medical device combining a retinal implant with camera-equipped eyeglasses designed to restore sight for patients with age-related macular degeneration.
- **Who:** Developed by Pixium Vision, the Prima system targets over 5 million patients worldwide suffering from age-related macular degeneration, offering a novel solution to restore lost vision.
- **What it does:** This system significantly improves vision for patients with previously untreatable macular degeneration by integrating an advanced retinal implant with specialized camera-equipped eyeglasses.
- **Why it matters:** It matters because it represents a breakthrough in ophthalmology, offering the first effective treatment to restore sight for millions globally suffering from a previously incurable condition.
- **Strategic view:** This innovation signals a growing intersection of advanced medical devices, AI-powered vision systems, and personalized healthcare, opening new market opportunities in health technology for TMT players.

Love is infrastructure

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** The piece explores human relationships as a critical infrastructure, where digital connectivity and perceived value shape interaction patterns more than physical proximity.
- **Who:** The narrative features Barnabas and Mainspring, archetypal entities whose interaction patterns prioritize distant, perceived "richer" connections over proximal but under-leveraged relationships.
- **What it does:** It illustrates how digital infrastructure and perceived value can lead entities to prioritize engagement with distant, seemingly "richer" connections over proximate, less developed relationships.
- **Why it matters:** It matters because it challenges the assumption that physical or digital proximity automatically translates into deep engagement or value, highlighting the pull of perceived richer, distant opportunities.
- **Strategic view:** TMT leaders should strategically analyze how digital infrastructure influences relationship formation, aiming to unlock and monetize the latent potential within under-leveraged proximate connections and communities.

Kids are outsmarting social media bans. That’s not a problem we need to solve.

MIT Technology Review – Tech · Topic: **AI/Cloud/Quantum**

- **What it is:** Multiple governments are attempting to restrict minors from social media platforms, yet these age-based bans are proving ineffective as children easily circumvent them.
- **Who:** Governments globally are enacting age restrictions on social media, impacting children, their parents, and major technology platform providers.
- **What it does:** This trend underscores the practical futility of statutory social media age bans, revealing minors' sophisticated methods for circumventing digital restrictions.
- **Why it matters:** It forces tech companies to re-evaluate enforcement mechanisms while highlighting the growing challenge of digital citizenship and parental responsibility amidst evolving regulatory landscapes.
- **Strategic view:** C-level executives should pivot from restrictive age-gating to fostering digital literacy, parental engagement, and designing platforms with intrinsic safety, recognizing bans are an unsustainable solution.
