Euclid discovers the most ancient quasar in the Universe

ESA - European Space Agency · Topic: **Space/Infra**

- **What it is:** Euclid, the European Space Agency's space telescope, has successfully identified the most ancient and distant quasar discovered to date, shedding new light on the early universe.
- **Who:** The European Space Agency (ESA) is the primary entity behind the Euclid mission, which made this groundbreaking astronomical observation.
- **What it does:** This discovery reveals a supermassive black hole actively feeding from the universe's infancy, providing direct observational evidence for theories of early cosmic structure formation.
- **Why it matters:** It offers unprecedented insights into the rapid growth of supermassive black holes and the evolution of galaxies just 700 million years after the Big Bang, challenging existing cosmological models.
- **Strategic view:** This scientific achievement highlights the crucial role of advanced imaging, data analytics, and global space infrastructure, driving innovation in sensor technology, AI processing, and secure data transmission for various industries.
